Fog Light Covers- Installation Instructions

Part Numbers: GT041FS, GT0986S (C or X), GT0981S (C or X),
GT0980S, GT0982S, GT046FS, GT0983S, GT040S and others

-CLEAN the lights with mild soap and water or a window cleaner and dry thoroughly.

-ALL of our fog light covers are a push on friction fit. Some of them will have a black rubber U-channel glued to the side back edges of the cover. Press evenly on the face of the cover so that it slides all the way back and is firmly adhering to the light.

-REMOVAL: Generally the best way to remove the covers is to use a wooden tongue depressor. Place the end of the depressor at the back edge of the cover and gently pry it forward (while working around the edge) to release the cover.

If you should have a need to return your item for any reason, please contact the original point of sale for instructions.
