

# LED THIRD BRAKE LIGHT

(2021-2023+ BRONCO)

---

## INSTALLATION INSTRUCTIONS

### CONTENTS

---

(1) LED Third Brake Light

### TOOLS REQUIRED

---

T-25 Torx Bit/Socket  
T-30 Torx Bit/Socket  
Ratchet  
Pry Tool  
Lug Wrench

**STEP 1**

Remove the vehicle spare tire using a lug wrench, and set the spare tire aside.

**STEP 2**

Remove (4) T-30 Torx screws to disconnect the third brake light enclosure from the tire carrier.

**STEP 3**

Slightly lift the tail light enclosure over the tire carrier, and disconnect the wiring harness retainer from the enclosure using a pry tool. Then, remove (8) T-25 Torx screws from the tail light enclosure. Gently use a pry tool to separate the tail light enclosure assembly.

**STEP 4**

Unroute the wiring harness from the retainers in the enclosure, and unplug the third brake light. Place the brake light enclosure on a workable surface.

**STEP 5**

Remove (2) T-25 Torx screws from the vehicle third brake light. Remove the original third brake light from the enclosure.

**STEP 6**

Align the new third brake light to the vehicle enclosure using the dowels, and secure the new third brake light to the vehicle enclosure using the original (2) T-25 Torx screws.

Note: The OEM hardware will create threads in the light housing while threading the hardware into the light assembly.

**STEP 7**

Plug the new third brake light into the vehicle wiring harness, and neatly route the wiring harness into place. Re-assemble the third brake light enclosure using the original hardware. Ensure the wiring harness is not interfering with assembly.

**STEP 8**

Re-install the vehicle spare tire using the original vehicle lug nuts, and secure to OEM spare tire torque specifications: 98 ft. lbs.

Installation is now complete.
