

## Extended Mirror

**Installation Note:** Installation of these mirrors requires no tools but the tension of the strap on the mirror should be checked regularly to ensure the mirror will not come loose from the factory mirror it is installed on.

**NOTE:** Be sure the factory mirror is clean before installing the extended mirror. Damage to the surface finish of the factory mirror may be caused if dirt is trapped between the surfaces.

1

Install by first loosening the velcro strap on the extended mirror.

Hook the front edge on the factory mirror, wrap the strap around and install the rubberized hook on the inside edge as shown to the left.

2

Pull the strap through the extended mirror and cinch the strap up tight against the factory mirror. Now hook the velcro to keep the tension on the strap.

Removal is the opposite.

Be sure to pull strap tightly.
