

GLADIATOR GRILLE

(2018-2021 WRANGLER JL)

(2020-2021 GLADIATOR JT)

INSTALLATION INSTRUCTIONS

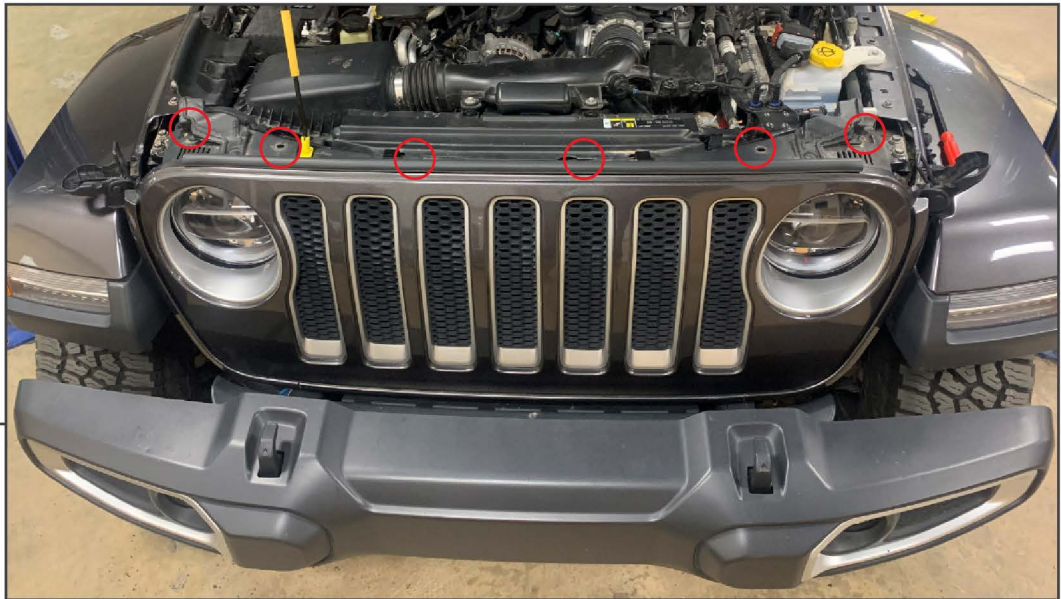

CONTENTS

- (1) Grille
- (1) Weatherstrip
- (2) Extension Panels
- (4) Phillips Screws
- (6) Plastic Push Clips
- (8) Metal Clips

TOOLS REQUIRED

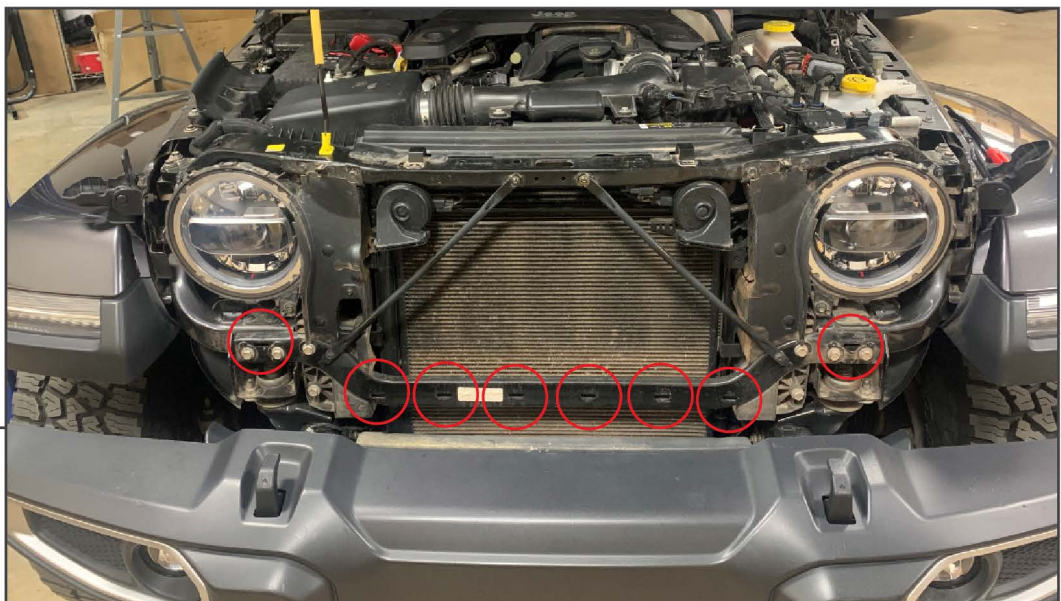

- Panel Removal Tool
- Phillips Screwdriver
- Plastic Pry Tool

SKU # J153707

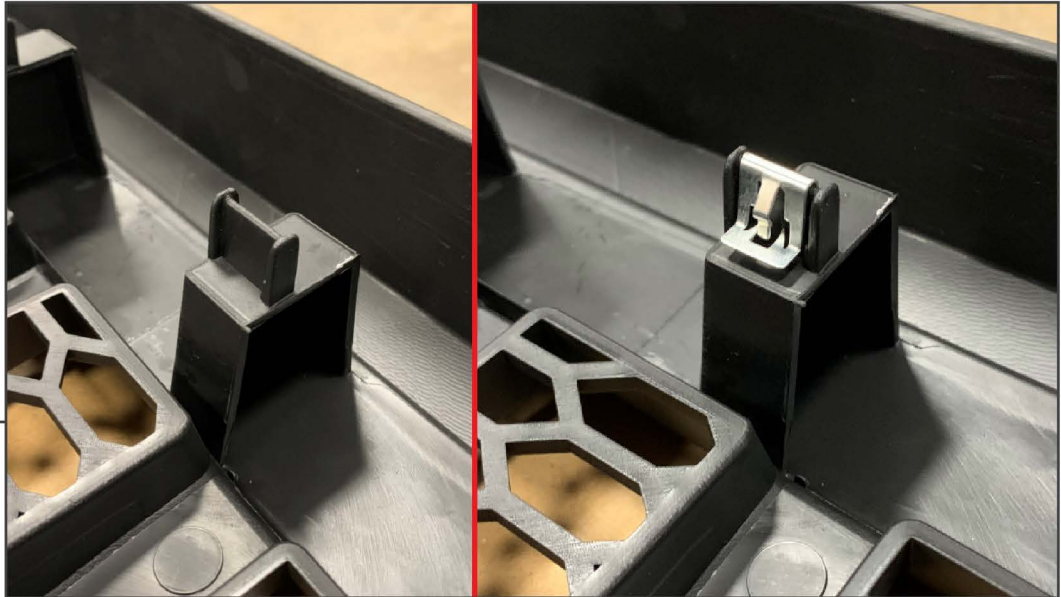

STEP 1

Remove (6) plastic push clips from the radiator support to release the upper portion of the grille assembly.

STEP 2

Firmly pull the lower portion of the grille to release the (8) metal clips securing the grille to the vehicle. Once removed, ensure any of the metal clips are not stuck in the lower mounting bracket.

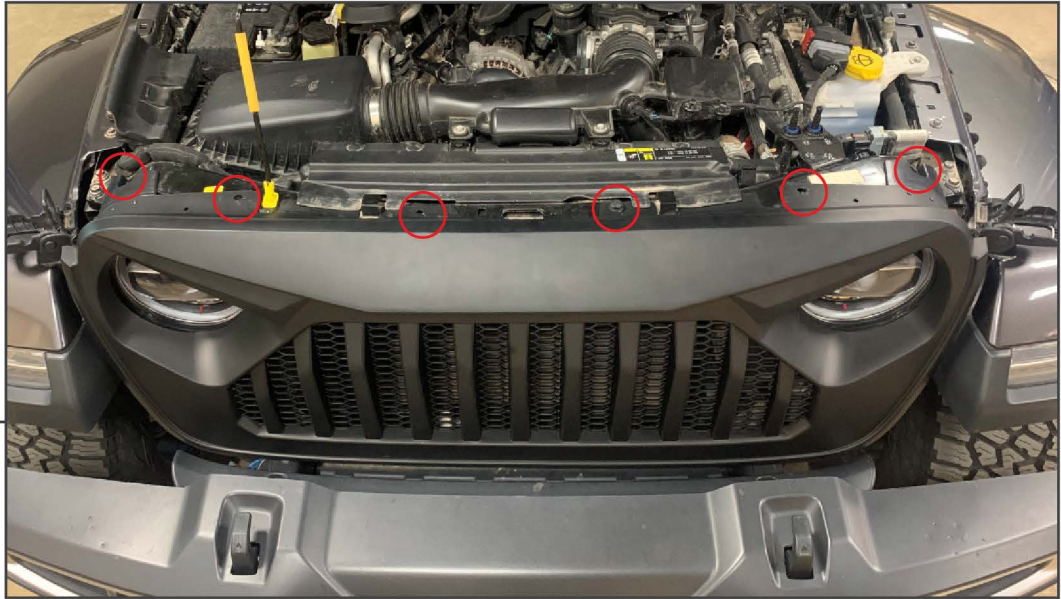

**STEP 3**

Place the grille face down on a soft surface. Install (8) metal clips onto the mounting posts on the back-side of the grille.

**STEP 4**

Install the (2) extension panels to the grille using (2) Phillips screws per panel. Place the panel behind the upper portion of the grille, then align the holes and insert the screws.

Note: The extension panels are directional.

**STEP 5**

Align the bottom of the grille to the lower mounting bracket and clip into place. Hinge the grille up to align the upper portion of the grille to the radiator support. Insert (6) plastic push clips into the top of the grille.

****Note:** The upper portion of the grille is angled downward to encourage a tight fit. Minor prying may be necessary to lift the upper portion of the grille over the radiator support.

**STEP 6**

Clean the top of the grille using isopropyl alcohol and a microfiber cloth. Install (1) weatherstrip to the upper portion of the grille by peeling the double sided tape backing, then firmly pressing the weatherstrip to the grille.

STEP 7

Installation is now complete.
