

Billet Short-Throw Shifter

2000-2004 Wrangler TJ w/ NV3550 Transmission

SKU # J236530

1. Using a flathead screwdriver, remove the “H” pattern cap from the shift knob, then remove the nut securing the shift knob to the vehicle shifter.
2. Pull the lower shifter boot away from the center console and lift over the shifter and set aside.
3. Remove hardware securing the center console into place. Depending on vehicle year, screws are located below the seat rails, cup holder, inside center console storage area, and near the shifter assembly. With the screws removed, begin to lift the center console from the vehicle, ensuring the parking brake is not interfering with removal.
4. Remove the metal plate surrounding the shifter and/or transfer case shifter to reveal the top of the transmission.
5. Remove the (4) bolts retaining the original shifter to the transmission. Lift the shifter away from the transmission.
6. Remove the plastic pivot cup from the original shifter, and transfer to the new shifter. Remove the shifter boot and shift knob from the new shifter.
7. Apply RTV gasket maker to the base of the new shifter, and fit the shifter to the transmission without the included boot. Secure using the original hardware, and torque to OEM specifications.
8. Fit the new shifter boot to the shifter, and secure using the squeeze clamp.
9. Re-install the vehicle interior using the original hardware, and then install the shift knob using the included jam nut.

Installation is now complete.
