- B. Swing lower clamp 90°.

5

- A. Swing lower clamp 90° into position under side rail.
- B. Tighten screw using the Allen key.

6

NOTE: Place the Instructions and Allen key into the glove box.

Attention

Check the cross bar mounting bolts regularly and tighten the bolts when necessary. Please distribute the weight of the cargo evenly between front & rear cross bar, never exceed the maximum load capacity. Always secure roof loading with ropes and cables to prevent it from falling off during driving.

If you are not qualified or lack the skills to do the installation, please consult with a professional mechanic. Please make sure to take necessary safety precautions before operation.
